

## Step 1: Open the Command Palette in VS Code (Ctrl + Shift + P)

type **Git: Clone**

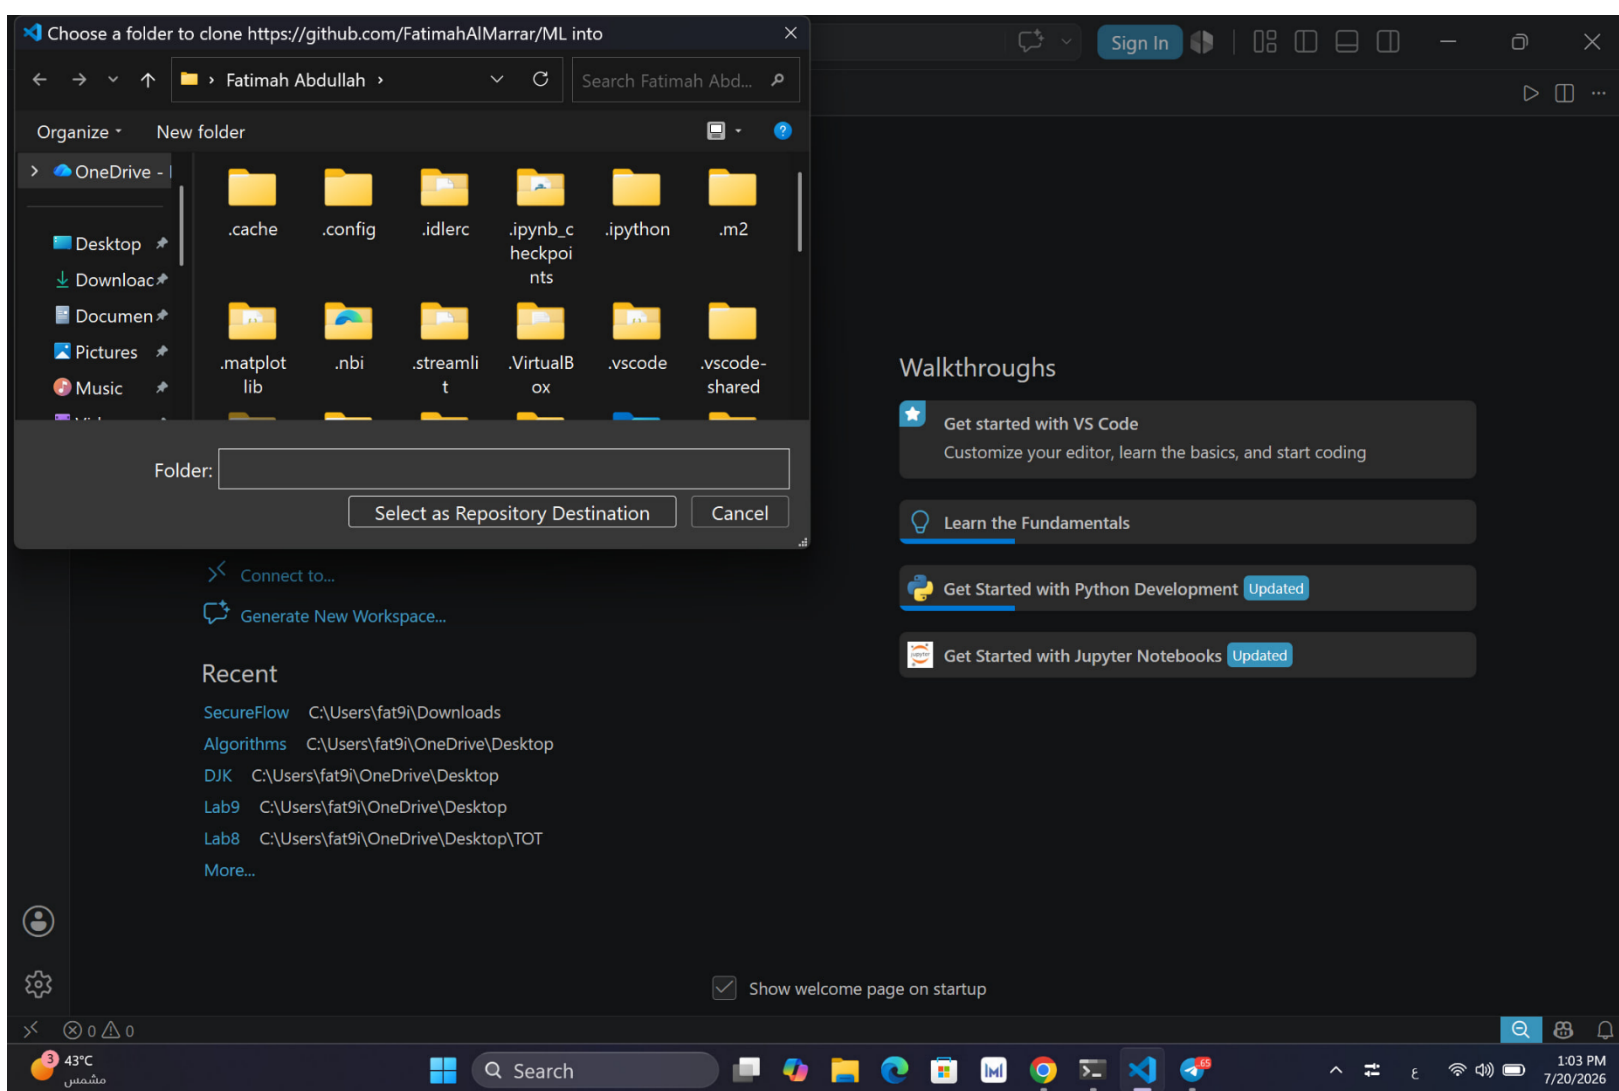

select the **Git: Clone** option

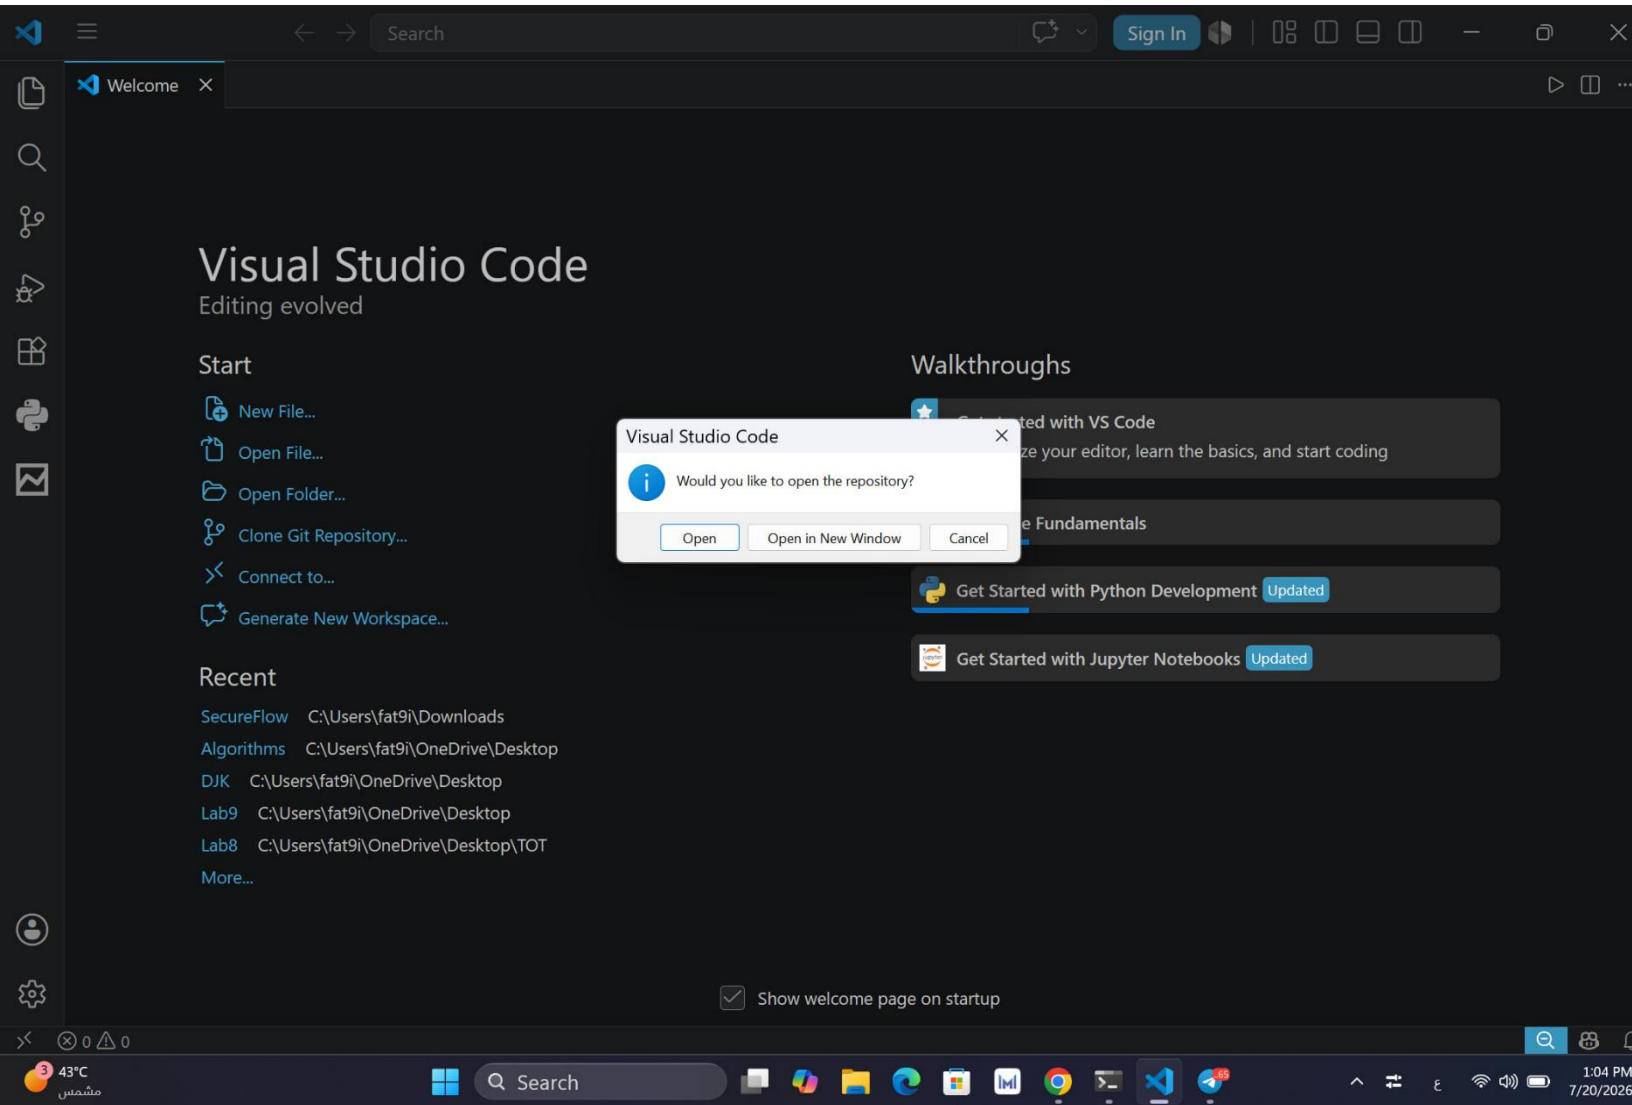

**Step 2: Paste the GitHub repository URL, then select Clone from URL to start cloning the repository to your computer.**

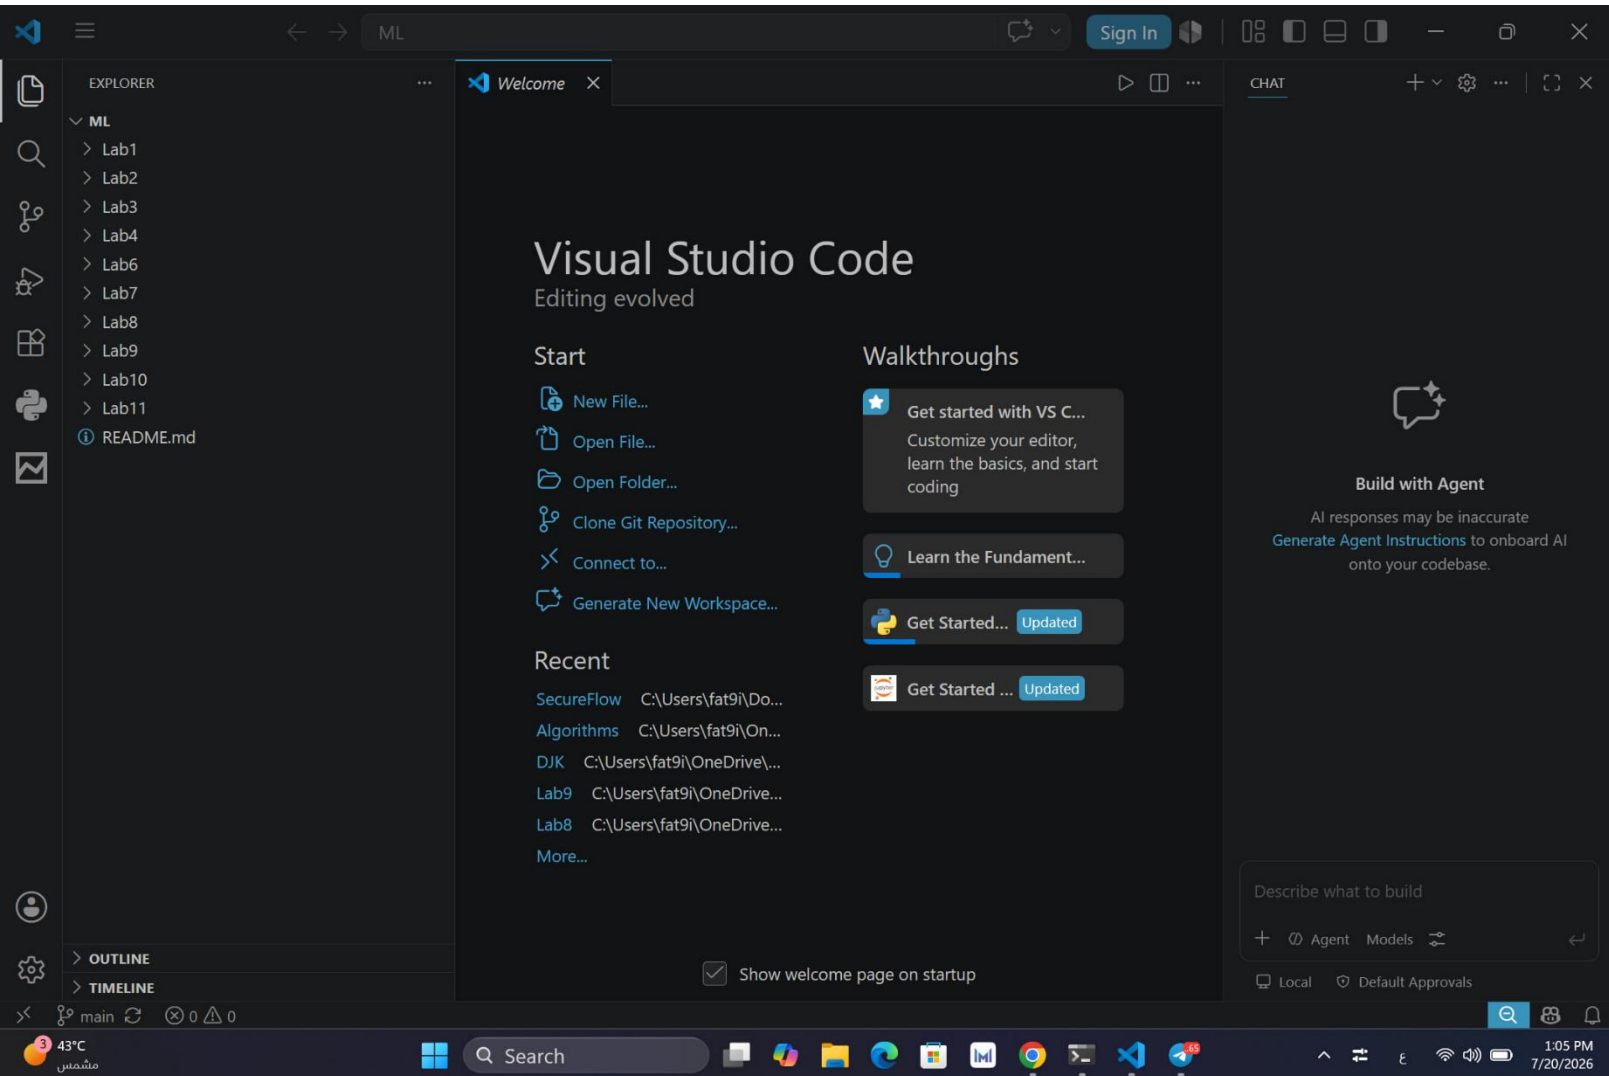

**Step 3: Choose the folder where you want to save the cloned repository, then click Select as Repository Destination.**

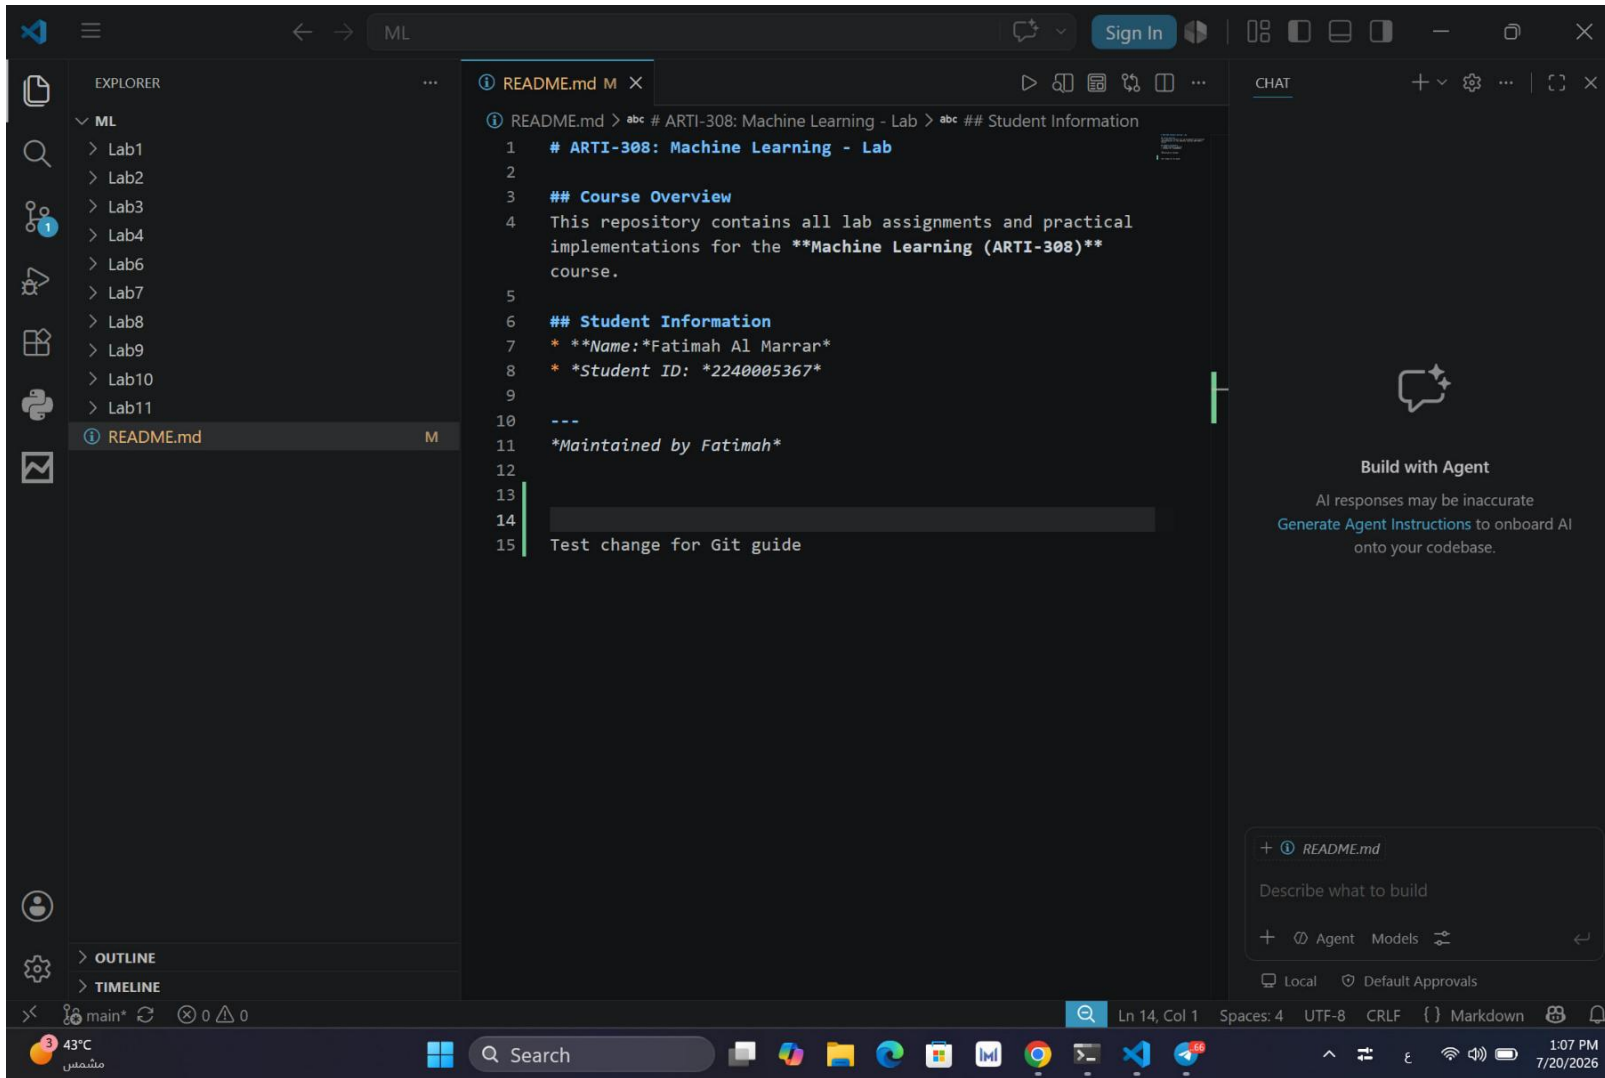

**Step 4: After the cloning process is complete, click Open to open the cloned repository in Visual Studio Code.**

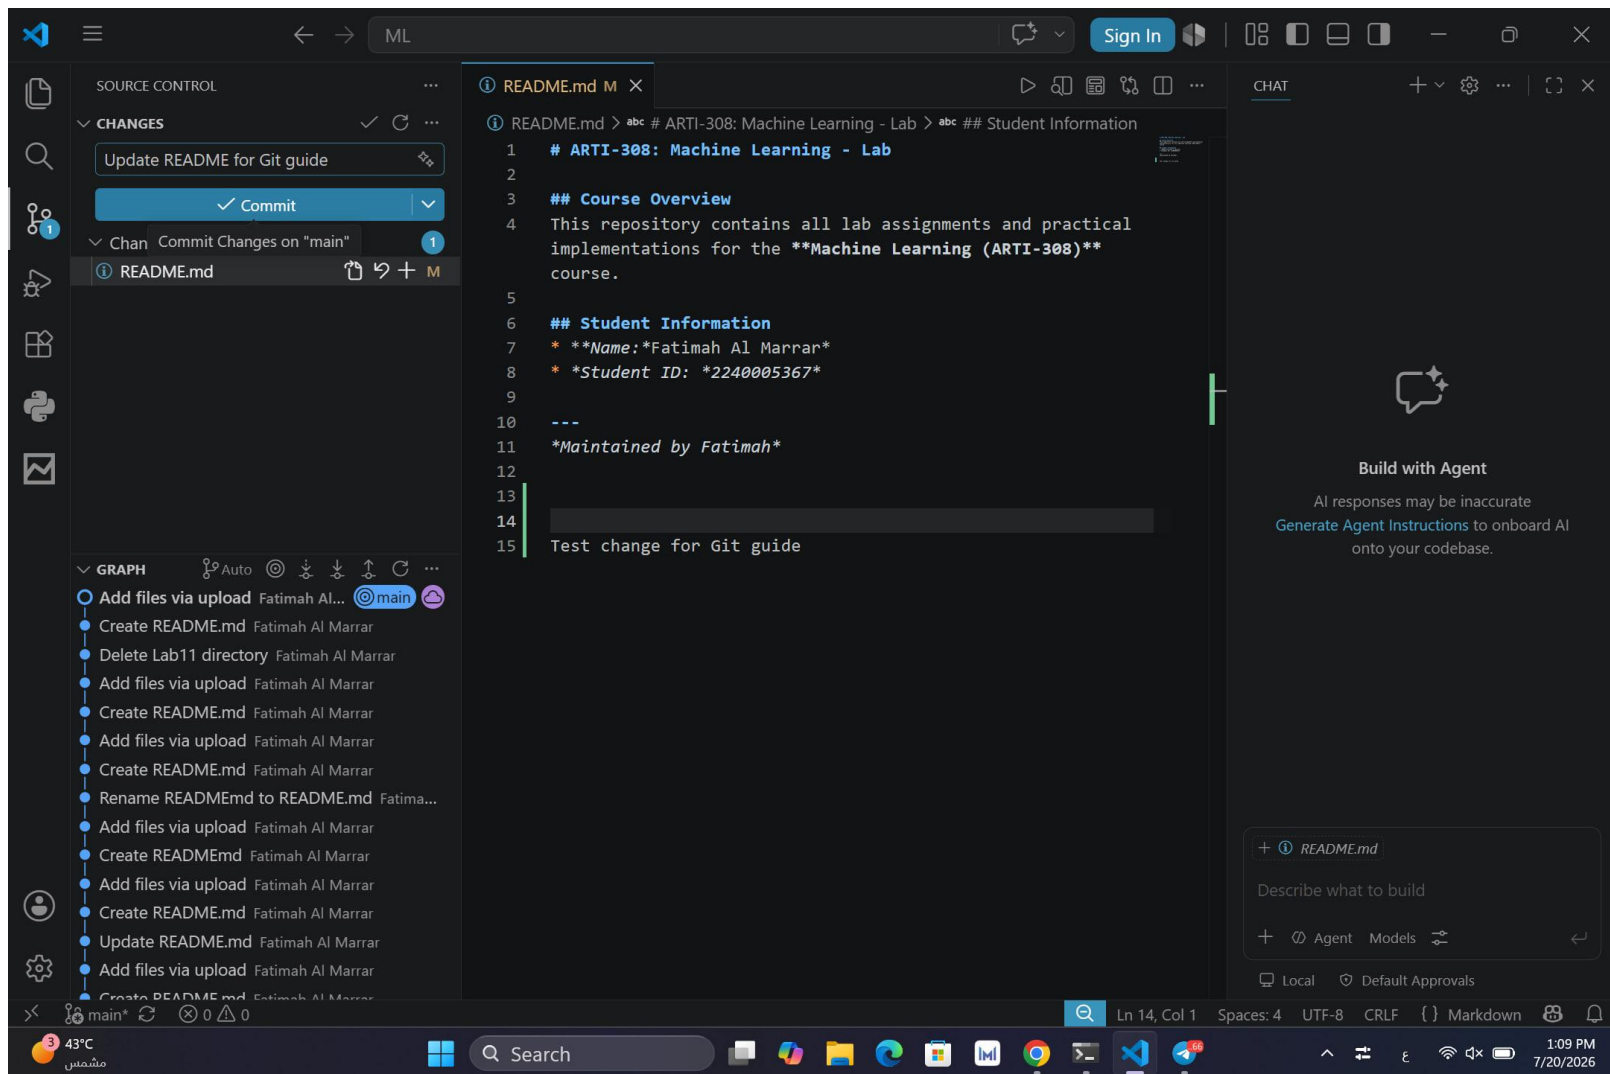

**Step 5: The repository has been successfully cloned and opened in Visual Studio Code. All project files and folders are now available in the Explorer panel.**

**Step 6: Open a file in the repository and make a small change. The modified file will be marked with M, indicating that Git has detected the change.**

**Step 7: Open the Source Control panel, enter a clear commit message describing the change, then click Commit to save the change to the local Git repository.**

**Step 8: The commit has been successfully created. Click Sync Changes to push the committed changes to the remote GitHub repository.**

The screenshot shows the Visual Studio Code interface with the following components:

- Source Control Panel (Left):** Displays the commit message "Message (Ctrl+Enter to commit on '...'") and a prominent blue button labeled "Sync Changes 1 ↑". Below this, the "GRAPH" section shows a list of outgoing changes on the "main" branch, including "Update README for Git guide" and several "Add files via upload" entries.
- Editor (Center):** Shows the content of the "README.md" file. The text includes:

```
1 # ARTI-308: Machine Learning - Lab
2
3 ## Course Overview
4 This repository contains all lab assignments and practical
  implementations for the **Machine Learning (ARTI-308)**
  course.
5
6 ## Student Information
7 * **Name:**Fatimah Al Marrar*
8 * **Student ID: *2240005367*
9
10 ---
11 *Maintained by Fatimah*
12
13
14
15 Test change for Git guide
```
- Chat Panel (Right):** Features a "Build with Agent" section with a warning that "AI responses may be inaccurate" and a link to "Generate Agent Instructions to onboard AI onto your codebase." Below this is a text input field with the placeholder "Describe what to build" and buttons for "Agent" and "Models".
- Status Bar (Bottom):** Indicates the current file is "README.md", the user is "Fatimah Al Marrar (now)", and the cursor is at "Ln 15, Col 26". It also shows "Spaces: 4", "UTF-8", "CRLF", and "Markdown" settings.
